## Gibbon 5

The Gibbon 5 were developed specifically to meet the needs of a home studio where space is rare. Equipped with a magnetically shielded silk dome tweeter and a 5 1/4" polypropylene- Woofer this monitor allows fatigue-free and precise monitoring. Woofer and tweeter are powered by a specifically tailored Class A/B amplifier, which provides increased dynamics. On the rear panel you find the inputs (balanced XLR, 6.3 mm jack and RCA balanced) and three knobs to regulate the overall volume and the high range and low-frequency signal.

## Gibbon 8

The Gibbon 8 was developed especially for the demands of the Home-Studio, where most lack the full space needed to optimally produce music. Due to their compact dimensions, the Gibbon monitors make it easier to work in tight spaces. Equipped with a silk tweeter and magnetically shielded Polypropylene woofer allows this monitor to deliver precise playback. The woofer and the tweeter are powered by a single Class A/B amplifier, guaranteeing improved dynamics.

# Turbo Series

## Turbo 5

Active nearfield monitors Made from custom-shaped MDF material, the cabinet is not only stylish in appearance, but also employs serious engineering to achieve the best acoustic performance. The bass-reflex acoustic design combines maximum efficiency and optimal bass extension. The MDF material ensures proper damping of vibrations from the drivers that can create audible distortion in the enclosure. All this is done behind a sophisticated industrial design utilizing modern fashion elements. In order to achieve this perfect combination of sound quality and appearance, the Turbo series enclosures were designed as a non-regular hexagon. Using high quality pure silk from Europe, the patented dome shape perfectly articulates the high frequencies out past 20 kHz. It is designed to have a low resonance (for a low crossover point) but also high power handling.
